

1. Executive Summary

When looking solely at foreign funding, UVA does not rank highly compared to its peers, placing 101st of 318 institutions with \$22.2 million between 2014 and 2020. I would need to understand other sources of funding, such as domestic and private, to get a full picture of where UVA ranks overall. However, if UVA were to start pursuing foreign funding more heavily, I believe it would be best to seek contracts, which make up 65% of the market. UVA has a great reputation, an excellent education, and outstanding people, and we should use these characteristics to our advantage and engage in primarily education-focused contracts.

2. Initial Analyses

Foreign funding is highly concentrated, with the mean institution receiving \$52 million but the median only \$6.5 million. Carnegie Mellon, Cornell, Georgetown, and Northwestern rank at the top because of their branch campuses in Qatar. In addition, contracts make up 65% of the money while monetary gifts are around 35%. The market also grew nearly \$2 billion from 2014 to 2019.

UVA's median transaction is \$80,500, roughly \$14,000 below the market median. Its mean of \$226,000, however, is less than half the market mean of \$588,000, which means UVA does not have any large foreign deals. Its largest funders are AstraZeneca, the International Centre for Diarrhoeal Disease Research in Bangladesh, and Haydom Lutheran Hospital in Tanzania, all tied to UVA's School of Medicine's global-health programs.

3. Strategy

To find new sources of money for UVA, I would first look to the largest sources. Six of the ten largest source countries gave UVA nothing at all. The countries worth targeting divide into two categories.

The first is large research economies: Canada, Germany, India, Japan, and Australia. In this area, UVA can extend the model its medical school already uses, building research contracts with hospitals, pharmaceutical firms, and national research agencies. These countries fund heavily through contracts, which matches UVA's existing mix.

The second group is the Gulf states, the most important being Qatar. The Qatar Foundation funds four of the top ten institutions, and its funding is mostly education based: branch campuses, degree programs, and executive education. UVA could play into its reputation as a top educational institution and really look to expand here, particularly through Darden and McIntire. China and Saudi Arabia offer similarly large pools but would face the greatest scrutiny.

4. Prospects

The top prospects for increasing UVA's foreign giving are Canada, Germany, India, and Qatar, all of which carry less scrutiny risk than China or Saudi Arabia. By using UVA's brand as leverage, we would be able to win more contracts and surpass some of the lower-end players in foreign giving. Reaching the level of Michigan or Duke, however, would require a Gulf-scale

education agreement rather than incremental research contracts. A limitation important to note is that this is solely foreign giving data, and it would be important to examine all funding sources to properly determine rankings against peer institutions.

Main changes beyond grammar: added your rank and dollar figure to the summary so it opens with the finding, replaced the vague "attract more students" line with what the research-contract model actually involves, softened "low scrutiny risks" to a comparison since Qatar does draw Section 117 attention, and fixed the donor count.
